

With a huge resource of technical expertise and practical know-how, we offer a comprehensive package of services:

- Site Survey
- System installation design
- Budgets and proposals
- All products manufactured by Andel in the UK
- Equipment supply
- Professional installation services throughout the UK
- Commissioning
- O&M manuals
- After sales support
- Maintenance services

Andel is accredited by CIBSE as an official CPD teaching material provider.

Andel Beats Leaks...

FLOODLINE, the award winning advanced leak detection system

www.andel.co.uk Tel: +44 (0) 1484 845 000

FLOODLINE - the award winning leak detection system for ALL critical risk areas

Leaks are common and will, if allowed to continue unchecked, cause extensive damage, disruption and loss.

Formed in 1992, Anadel Ltd is the recognised market leader in Leak Detection Systems.

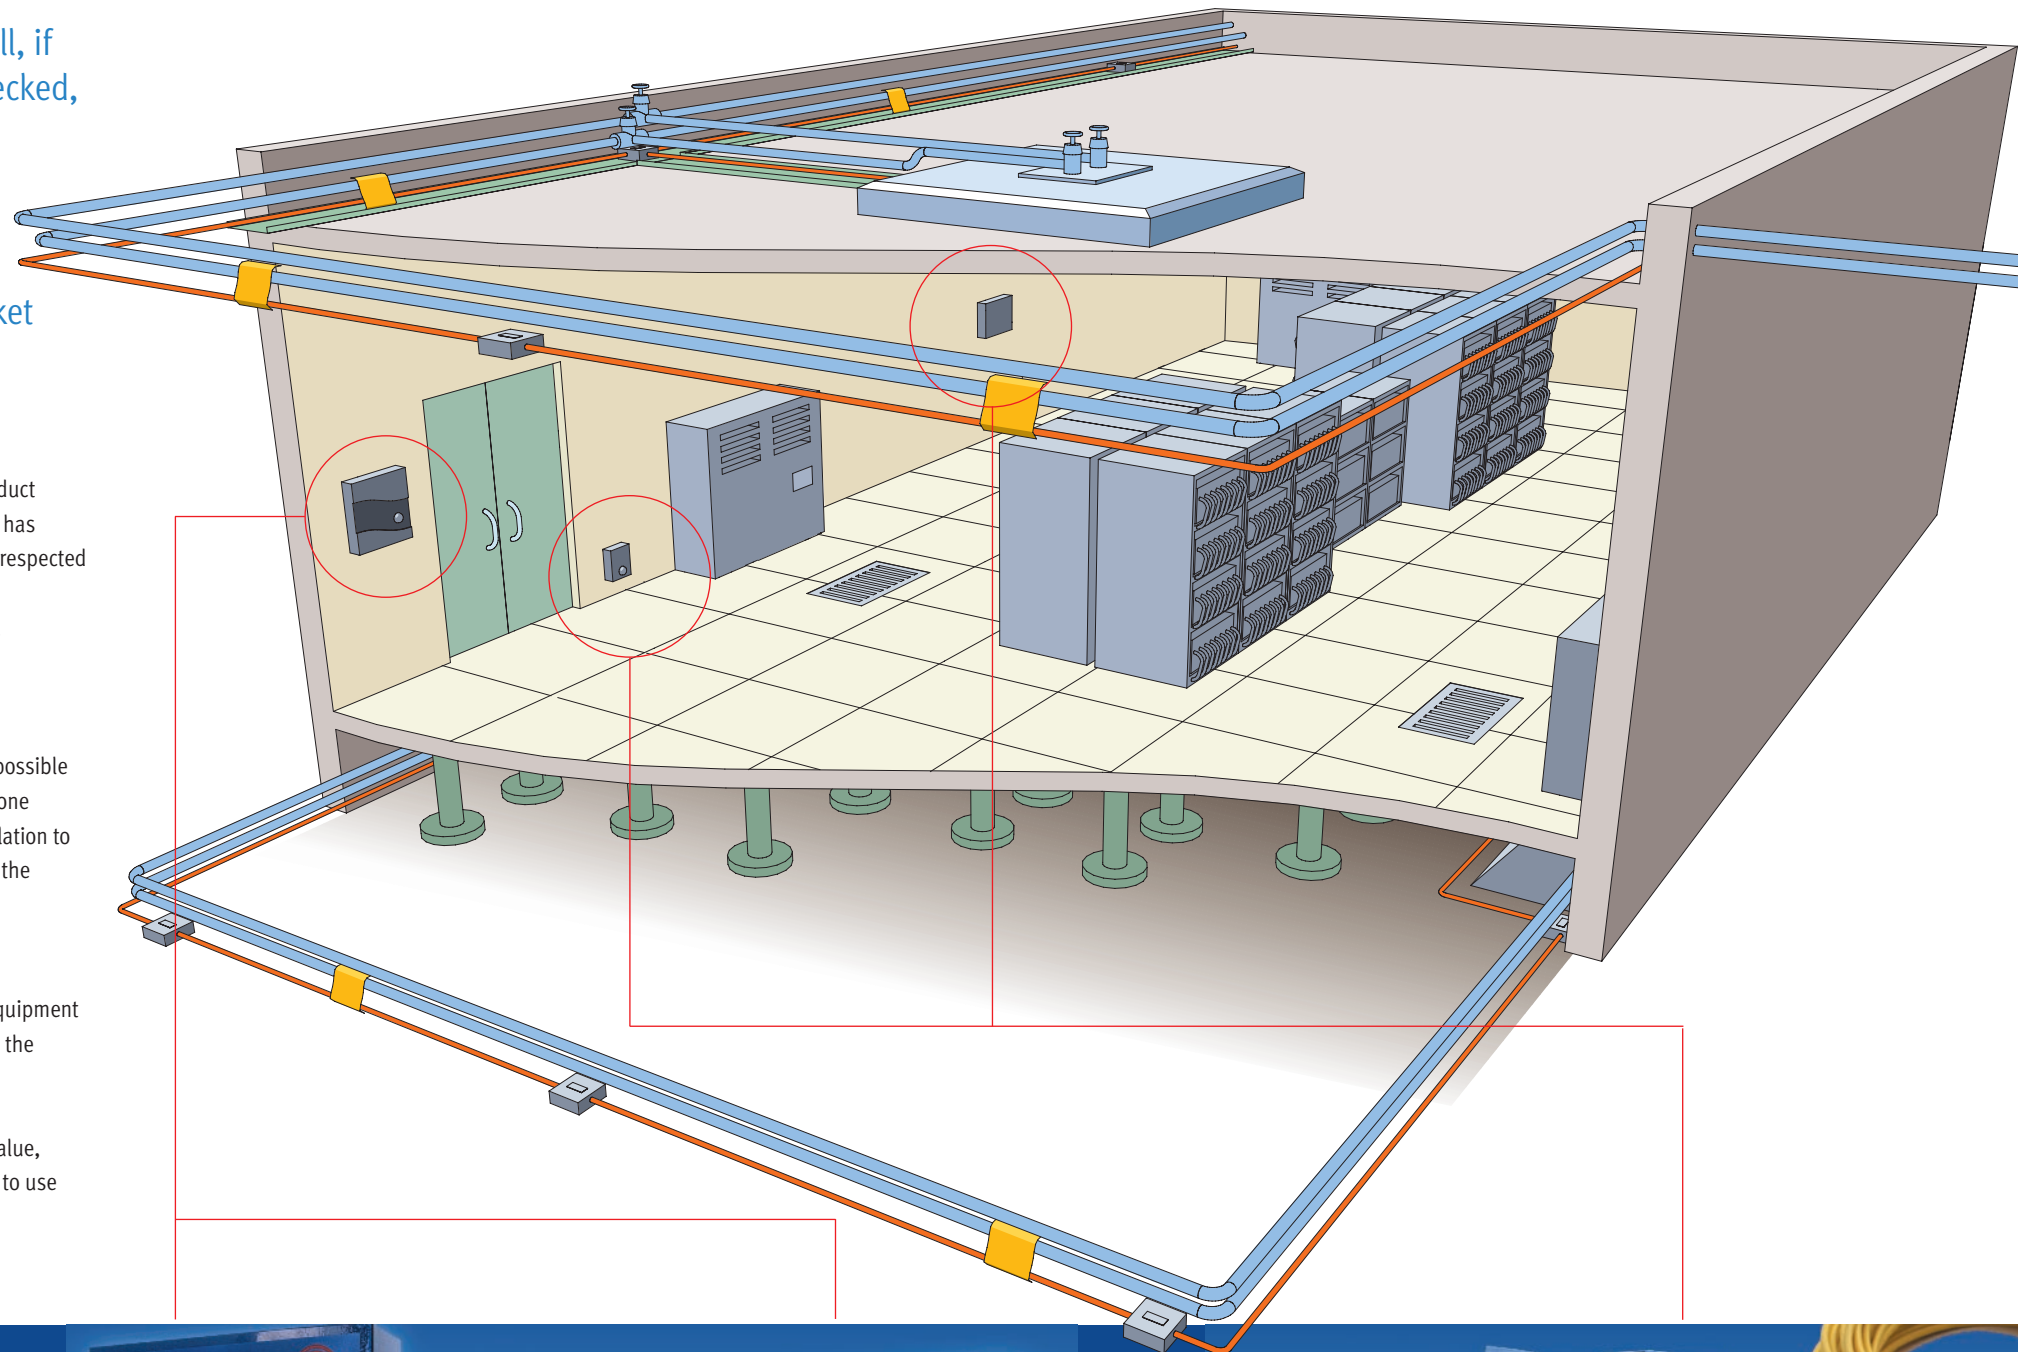

With a total commitment to service, product development, quality and pricing, Anadel has emerged as one of the largest and most respected suppliers of specialised leak detection systems throughout the world.

Floodline

The Anadel 'FLOODLINE' range covers all possible requirements, from stand-alone single zone modules and units for the smaller installation to comprehensive multi-zone systems with the capacity to handle the largest building.

FLOODLINE leak detection systems offer outstanding flexibility, with a range of equipment and sensors to tailor each installation to the client's exact needs.

FLOODLINE systems provide unrivalled value, reliability and are simple to install, easy to use and, above all, dependable.

How Floodline Works

Floodline is installed in sensitive and critical areas to provide early warning of leaks which may otherwise go unnoticed until too late. Floodline allows early action to be taken to limit damage, disruption and loss.

Floodline - a Zoned System

Zoned systems are easy to install and maintain as well as offering versatility and cost benefits.

Floodline Versatility

Large range of sensors for • Water • Gas • Oil
• Temperature • Humidity

Choice of control modules and panels from 1 to 128 zones, Floodline offers the best solution for leak detection in hi-tech offices, call centres, historic buildings, museums and art galleries, telecoms, clean rooms and many more.

The Benefits

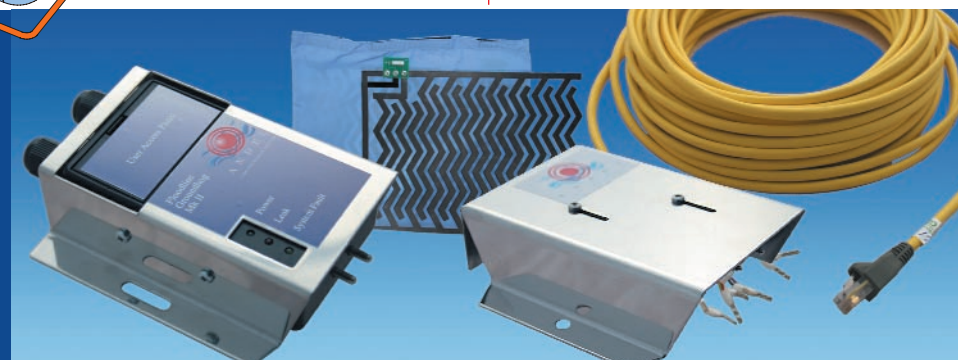

- Each zone is separate. An alarm in one zone has no effect on the functioning of the rest of the system.
- Continuous monitoring of each zone for leaks and system faults.
- Multi-zoning. The system can detect and report any number of simultaneous alarms.
- No restriction on zone size.
- Different sensor types from zone to zone depending on requirements.
- Separate outputs/communications can be installed for each zone.
- Better cost control through choice of zone size.
- Alarm prioritisation for important zones.
- System can be upgraded to cater for future needs.
- Easy to install, use, service and repair.

The FLOODLINE range offers a choice of control modules and panels from 1 to 128 zones

Multi-zone Control Module

128 Control Panel

FLOODLINE sensors include water detection cable, tape, point, pad and pipe sensors. Also oil, refrigerant gas, temperature and humidity sensors. Custom built systems for special requirements.
